Global Disclaimer

This document serves as a disclaimer for the crypto smart contract audit conducted by Skeleton Ecosystem. The purpose of the audit was to review the codebase of the smart contracts for potential vulnerabilities and issues. It is important to note the following:

Limited Scope: The audit is based on the code and information available up to the audit completion date. It does not cover external factors, system interactions, or changes made after the audit. The audit itself can not guarantee 100% safety and can not detect common scam methods like farming and developer sell-out.

No Guarantee of Security: While we have taken reasonable steps to identify vulnerabilities, it is impossible to guarantee the complete absence of security risks or issues. The audit report provides an assessment of the contract's security as of the audit date.

Continued Development: Smart contracts and blockchain technology are evolving fields. Updates, forks, or changes to the contract post-audit may introduce new risks that were not present during the audit.

Third-party Code: If the smart contract relies on third-party libraries or code, those components were not thoroughly audited unless explicitly stated. Security of these dependencies is the responsibility of their respective developers.

Non-Exhaustive Testing: The audit involved automated analysis, manual review, and testing under controlled conditions. It is possible that certain vulnerabilities or issues may not have been identified.

Risk Evaluation: The audit report includes a risk assessment for identified vulnerabilities. It is recommended that the development team carefully reviews and addresses these risks to mitigate potential exploits.

Not Financial Advice: This audit report is not intended as financial or investment advice. Decisions regarding the use, deployment, or investment in the smart contract should be made based on a comprehensive assessment of the associated risks.

By accessing and using this audit report, you acknowledge and agree to the limitations outlined above. Skeleton Ecosystem and its auditors shall not be held liable for any direct or indirect damages resulting from the use of the audit report or the smart contract itself.

Please consult with legal, technical, and financial professionals before making any decisions related to the smart contract.

Overview

Contract Name	Agile
Ticker/Symbol	Agile
Blockchain	Binance Smart Chain BEP20
Contract Address	0xB278ED042133238Ea33152ba2320Cdb0a6BE26f9
Creator Address	0x1e266b85E4635e9Ec33eAD1D233A20B3577f8CD5
Current Owner Address	0x1e266b85E4635e9Ec33eAD1D233A20B3577f8CD5
Contract Explorer	https://bscscan.com/address/0xb278ed042133238ea33152ba2320cdb0a6be26f9#code
Compiler Version	v0.8.18+commit.87f61d96
License	None
Optimisation	No with 200 Runs
Total Supply	1,000,000,000 AGILE
Decimals	9

Creation/Audit

Contract Deployed	07.01.2023
Audit Created	08.01.2024
Audit Update	V 1.0

Contract Function Analysis

Pass

Attention Item

Risky Item

■ Pass

■ Attention

■ Risk

Contract Verified		The contract source code is uploaded to blockchain explorer and is open source, so everybody can read it.
Contract Ownership		0x1e266b85E4635e9Ec33eAD1D233A20B3577f8CD5 Deployer
Buy Tax	25 % Launch tax	Shows the taxes for purchase transactions. Above 10% may be considered a high tax rate. More than 50% tax rate means may not be tradable. Fee can be set!
Sell Tax	25 % Launch tax	Shows the taxes for sell transactions. Above 10% may be considered a high tax rate. More than 50% tax rate means may not be tradable. Fee can be set!
Honeypot Analyse		Holder is able to buy and sell. If honeypot: The contract blocks sell transfer from holder wallet. Multiple events may cause honeypot. Trading disabled, extremely high tax
Liquidity Status		Not launched.
Trading Disable Functions		No Trading suspendable function found If a suspendable code is included, the token maybe neither be bought or sold (honeypot risk). If contract is renounced this function can't be used
Set Fees function		Fee Setting function found. The contract owner may contain the authority to modify the transaction tax. If the transaction tax is increased to more than 49%, the tokens may not be able to be traded (honeypot risk).
Proxy Contract		Not a proxy contract!
Mint Function		No Mint Function detected Mint function is transparent or non-existent. Hidden mint functions may increase the amount of tokens in circulation and effect the price of the token. Owner can mint new tokens and sell.

Balance Modifier Function		<p>No Balance Modifier function found.</p> <p>If there is a function for this, the contract owner can have the authority to modify the balance of tokens at other addresses. For example revoke the bought tokens from the holders wallet. Common form of scam: You buy the token, but it's disappearing from your wallet.</p>
Blacklist Function		<p>No Blacklist Setting function found.</p> <p>If there is a blacklist, some addresses may not be able to trade normally. Example: you buy the token and right after your Wallet getting blacklisted. Like so you will be unable to sell. Honeypot Risk.</p>
Whitelist Function		<p>Whitelist Setting function found.</p> <p>If there is a function for this Developer can set zero fee or no max wallet size for addresses (for example team wallets can trade without fee. Can cause farming)</p>
Hidden Owner Analysis		<p>No hidden or multi owner</p> <p>For contract with a hidden owner, developer can still manipulate the contract even if the ownership has been abandoned.</p>
Retrieve Ownership Function		<p>No functions found which can retrieve ownership of the contract.</p> <p>If this function exists, it is possible for the project owner to regain ownership even after relinquishing it. Also known as fake renounce.</p>
Self Destruct Function		<p>No Self Destruct function found.</p> <p>If this function exists and is triggered, the contract will be destroyed, all functions will be unavailable, and all related assets will be erased.</p>
Specific Tax Changing Function		<p>No Specific Tax Changing Functions found.</p> <p>If it exists, the contract owner may set a very outrageous tax rate for assigned address to block it from trading. Can assign all wallets at once!</p>
Trading Cooldown Function		<p>Trading Cooldown Function found.</p> <p>If there is a trading cooldown function, the user will not be able to sell the token within a certain time or block after buying. Like a temporary honeypot.</p>
Max Transaction and Holding Modify Function		<p>Max Transaction and Holding Modify function found.</p> <p>If there is a function for this, the maximum trading amount or maximum position can be modified. Can cause honeypot</p>
Transaction Limiting Function		<p>No Transaction Limiter Function Found.</p> <p>The number of overall token transactions may be limited (honeypot risk)</p>

Details of Risk - Attention Items

The following functions are listed as functions may be triggered by the owner of the contract.

⚠ Whitelist (Set excluded) [Remediation: Renounce ownership]

If there is a function for this Developer can set zero fee or no max wallet size for addresses (for example team wallets can trade without fee)

```
583 |  
    | ftrace | funcSig  
584 | function setIsWalletLimitExempt(address holder!, bool exempt!) external onlyOwner {  
585 |     |isWalletLimitExempt[holder!] = exempt!;  
586 | }  
587 |  
    | ftrace | funcSig
```

⚠ Max Transaction and Holding Modify function [Remediation: Renounce ownership]

If there is a function for this, the maximum trading amount or maximum position can be modified. Can cause honeypot

```
575 |  
    | ftrace | funcSig  
576 | function setMaxTxAmount(uint256 maxTxAmount!) external onlyOwner() {  
577 |     |maxTxAmount = maxTxAmount!;  
578 | }  
579 |
```

```
587 |  
    | ftrace | funcSig  
588 | function setWalletLimit(uint256 newLimit!) external onlyOwner {  
589 |     |walletMax = newLimit!;  
590 | }  
591 |
```

⚠ Set Trading Fees

[Remediation: Renounce ownership]

The contract owner may contain the authority to modify the transaction tax. If the transaction tax is increased to more than 49%, the tokens may not be able to be traded (honeypot risk).

```
552 | ftrace | funcSig
553 | function setBuyTaxes(uint256 newLiquidityTax!, uint256 newMarketingTax!, uint256 newTeamTax!) external onlyOwner() {
554 |     | _buyLiquidityFee = newLiquidityTax!;
555 |     | _buyMarketingFee = newMarketingTax!;
556 |     | _buyTeamFee = newTeamTax!;
557 |     | _totalTaxIfBuying = _buyLiquidityFee.add(_buyMarketingFee).add(_buyTeamFee);
558 | }
559 |
560 | ftrace | funcSig
561 | function setSellTaxes(uint256 newLiquidityTax!, uint256 newMarketingTax!, uint256 newTeamTax!) external onlyOwner() {
562 |     | _sellLiquidityFee = newLiquidityTax!;
563 |     | _sellMarketingFee = newMarketingTax!;
564 |     | _sellTeamFee = newTeamTax!;
565 |     | _totalTaxIfSelling = _sellLiquidityFee.add(_sellMarketingFee).add(_sellTeamFee);
566 | }
```

Contract Security

Total Findings: 5

■ High 0

■ Medium 0

■ Low 3

■ Info 2

■ **High Severity Issues:** High possibility to cause problems, need to be resolved.

■ **Medium Severity Issue:** Will likely cause problems, recommended to resolve.

■ **Low Severity Issues:** Won't cause problems, but for improvement purposes could be adjusted.

■ **Informational Severity Issues:** Not harmful in any way, information for the developer team.

Contract Weakness Classification

THE SMART CONTRACT WEAKNESS CLASSIFICATION REGISTRY (SWC REGISTRY) IS AN IMPLEMENTATION OF THE WEAKNESS CLASSIFICATION SCHEME PROPOSED IN EIP-1470. IT IS LOOSELY ALIGNED TO THE TERMINOLOGIES AND STRUCTURE USED IN THE COMMON WEAKNESS ENUMERATION (CWE) WHILE OVERLAYING A WIDE RANGE OF WEAKNESS VARIANTS THAT ARE SPECIFIC TO SMART CONTRACTS.

 **High severity Issues: (0)**

 **Medium severity issues: (0)**

 **Low severity issues: (3)**

- Missing Events
- Floating Pragma
- Long Number Literals

 **Informational severity issues: (2)**

- Public Functions Should be Declared External
- State Variables Should be Declared Constant

ID	Description	AI	Manual	Result
SWC-100	Function Default Visibility	Passed	Passed	Passed
SWC-101	Integer Overflow and Underflow	Passed	Passed	Passed

Audit Scope

Audit Method.

Our smart contract audit is an extensive methodical examination and analysis of the smart contract's code that is used to interact with the blockchain. Goal: discover errors, issues and security vulnerabilities in the code. Findings getting reported and improvements getting suggested.

Automatic and Manual Review

We are using automated tools to scan functions and weaknesses of the contract. Transfers, integer over-undeflow checks such as all CWE events.

Tools we use:

Visual Studio Code

CWE

SWC

Solidity Scan

SVD

In manual code review our auditor looking at source code and performing line by line examination. This method helps to clarify developer's coding decisions and business logic.
